

AdBlue®

clean with
confusion
free

refilling.

AdBlue® (DEF) urea solution is added at depots and petrol station forecourts. What is the reason for the use of Elaflex AdBlue® refilling equipment at the most European petrol stations?

Purity of the media: SCR catalysts are destroyed by contaminated urea solution (e.g. due to uncoated nozzles or poor hose assemblies). ZVA AdBlue HV for the refilling of tank trucks and Slimline 16 AdBlue hoses guarantee constant AdBlue® purity.

Avoid misfilling: Dispensing of ZVA AdBlue HV is only possible in combination with standard conform magnet adapters such as ELAFIX 40 which are incorporated within the filler neck of AdBlue® road tanker tanks. Confusion free refilling Diesel/AdBlue®. Also available special type ELAFIX 40 ANTI-SIPHON with anti-theft device.

Safety in the event of drive-away incidents: Safety Swivel Break SSB 16 SS separates to prevent dispenser from being pulled over and fuel spills.

Good reasons to choose the best AdBlue® refilling equipment from Elaflex instead of poor components.
