

Clean: AdBlue® Refilling Equipment

AdBlue® urea solution which does not comply with the ISO 22241-1 standard can lead to damages in the SCR catalytic and may result in costly claims.

The used equipment for the transfer of urea solution must therefore provide high media purity over the whole transport chain – from the producer to the vehicle tank.

All components have to ensure high reliability and an integrate misfilling prevention. ELAFLEX products fulfill these requirements.

For our complete product range for the AdBlue® refilling please see www.elaflex.de/en/adblue

AdBlue® is a registered trademark of VDA.
