

FROM TERMINAL TO NOZZLE – ELAFLEX'S SOLUTIONS FOR THE MOBILITY OF THE FUTURE TO BE PRESENTED AT UNITI EXPO

Tomorrow's mobility will be versatile. The solution to problems concerned with the current debated issues on emissions, nitrogen oxides (NO²) and particulate matters cannot be solely provided by electric vehicles. A current German study confirms that climate protection goals in the transport sector can only be achieved by using CO² neutral fuels (E-Fuels) such as second generation biofuels and synthetic fuels – also available are L.P. Gas, compressed natural gas (CNG) or liquified, cryogenic natural gas (LNG) as typical eco-friendly alternatives. The supply of a wide mix of alternative and renewable fuels will be the key for future petrol station forecourts. A significant share it is going to be handled cost-effectively, by the existing infrastructure. Elaflex

is up for the challenge and supplies the corresponding portfolio 'From Terminal To Nozzle'. At UNITI expo 2018 international visitors will gain an insight into the refuelling equipment fitting for future requirements. The industry-leading ZVA Slimline 2 nozzles are suitable for all petrol and diesel fuels as well as their bio or E-fuel alternatives. Quick and safe natural gas refuelling is ensured by the CNG product range of Oasis Ltd., a member of the Elaflex group: fill valves and nozzles, ball and check valves, manifolds, break-away couplings and accessories. For AdBlue® refilling, Elaflex will present the latest version of the ZVA AdBlue LV nozzle. The ZVG 2 and GasGuard nozzle family for Autogas has been extended by the ZVG 2 K nozzle for the Japanese and Korean LPG market. Elaflex is continuously expanding its LNG product range. Besides the established MannTek products (Dry Cryogenic and Break-away Couplings) Elaflex will also showcase the newly developed LNG composite hose by Dantec.
