OASIS Engineering part of the ELAFLEX group of companies

Elaflex has again extended its digital service. The CNG product range of our subsidiary OASIS Engineering Ltd can be now configured online.

Link: oasisconfigurator.elaflex.de.

This feature is very user-friendly, informative and fast to use. All relevant technical files are available online.

Oasis is an internationally operating specialist for valves and couplings used in the compressed natural gas (CNG) industry. Oasis has established a strong reputation as supplier of CNG components and systems for filling stations and gas delivery networks. The company supplies standard products of their own design and customised or make to order engineering parts as required, to customers in over 40 countries.

For many years CNG users have been aware that the efficiency of CNG transfer has been impacted by the restrictions within their system. Unique is that the Oasis ULTRA FAST FILL SYSTEM™ is the first to use flow-rate matched components that have been purpose built at apertures and pressures which suit the larger rates of CNG transfer, required for larger vehicles and CNG trailers.

Oasis Engineering is the first component manufacturer to develop the ULTRA FAST FILL SYSTEM™ to transfer CNG from storage, through dispensers to waiting trucks and trailers. The UFS brings together Oasis's range of the ULTRA FAST FILL tank-head valves, ball valves, manifolds and breakaways alongside couplers and filling nozzles to deliver a better customer experience.

For more information on the above contact: Anton Martiniussen, ELAFLEX LTD, anton.martiniussen@elaflex.co.uk
