

Multi-Media – in another way

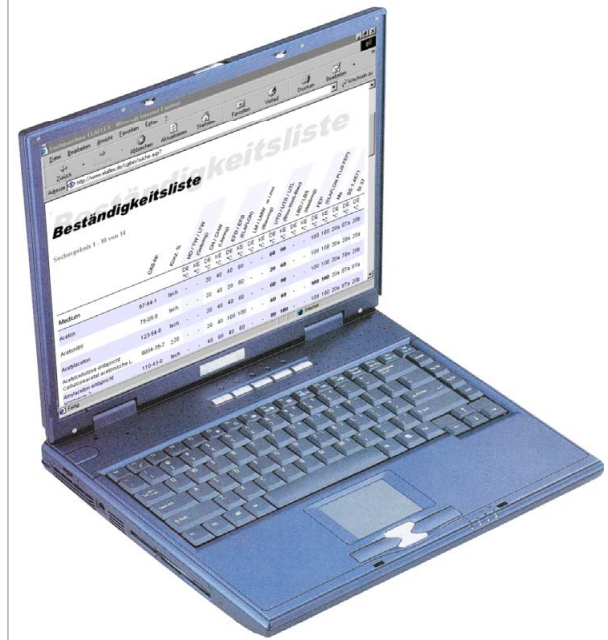

Multimedia – a synonym for innovation and progress, even outside the border of our virtual world. ELAFLEX will present Multi-Media touchable for real: in form of universal applied chemical hoses and PFA - coated fittings and with a new interactive chemical resistance chart.

Chemical hoses with an inner tube of UPE or fluoroplastics: there is not one year passing by without improvements. Since the last Achema ELAFLEX offers more new **universal hoses**. Community: safe, flexible, clean and low-priced because of reusable standard fittings. In this tradition the ELAFLEX stand will present current developments and improvements.

Which hose for which medium? The just completed extensive ELAFLEX **chemical resistance chart** will be presented as printed and interactive internet edition.

All DIN **standard fittings coated with Teflon® PFA** – an extensive stock program is under construction. The reusable stainless steel fittings are thin coated with the high resistant, diffusion- and abrasionproof PFA. A Video shows the simple assembly of these "Multi-Media-Fittings".

More highlights at the ELAFLEX stand B2-B3, hall 8 are as follows: a comparison of different Camlock fitting systems, new styles and approvals of our Dry Disconnect Coupling DDC as well as the biggest rubber expansion joint ERV 1000.
