

### Clean Transfer. Clean Connection.

The Hamburg hose assembly specialist Elaflex provides new solutions for the foodstuff, bio-tech and pharmaceutical industries.

At the TechnoPharm 2013 exhibition, for the first time Elaflex presented its new product line ELAPHARM® - hose assemblies to the DIN 26055-3 Standard.

### The Advantage

In contrast to other pharmaceutical hoses the hose construction of ELAPHARM is homogeneous where all layers including the lining are permanently bonded to each other. The result is a good kink and vacuum resistance. It also serves durability and flexibility.

ELAPHARM hoses have an ultra smoothly extruded and FDA-conform liner of DuPont™ Teflon® PTFE. Thereby, the hose is easy to clean and also suitable for highly viscous media.

### The Product Spectrum

The hose assemblies are deliverable in dimensions DN 13 to 50 mm and in two different versions: Type EPH-OHM (completely electrical conductive) or Type EPH (electrically isolating).

Coupling types with integrated hose tail are available as screw, flange and clamp connections to DIN 32676, 11864, 11853, 11851 und BioConnect® Standards. Two mounting systems can be chosen: Crimping 'free of dead spaces/beaded' for Triclamp or flange couplings or Crimping 'gap minimised' for all coupling types.

Hose assembling to customer specification in done in-house by Elaflex, straight from the reel - for a fast delivery of your assemblies.
