

Elaflex @ Inter Airport 2017

Our renown aircraft refuelling hoses will be available with an **improved NEON marking** in the near future. The new **reflecting** stripes increase safety, especially in low light situations.

For long hose assemblies we have developed **Hose Beads 'BD'** which notably improve the handling as they reduce friction against the tarmac. They additionally protect against hose abrasion. Hose Beads 'BD' can be easily assembled or disassembled and are suitable for reeling.

Our next generation overwing nozzle **ZVF 50** has been well received by aircraft refuelling operators worldwide. It meets the JIG guidelines, is lightweight, has good handling properties, and boasts an extremely low hold-open force and sensitive flow control. ZVF 50 is available with a variety of equipment options. For the installation on board of airfield refuellers, a corresponding nozzle boot NB-ZVF 50 can be delivered.

Elaflex partner and co-exhibitor MannTek will show their aviation product range: Dry Aviation Couplings for the loading of refuellers; Dry Disconnect Couplings for the loading of anti-icing fluids; Sampling, Vent or Drain Units as well as Full Flow and Ball Valves for refuellers.
