

All from a Single Source: Hose Assemblies for the Chemical and Pharmaceutical Industries

Elaflex provides standardised hoses and couplings for the transfer of dangerous goods and sensitive fluids – all from a single source.

At Achema 2018 (11-15 June; Hall 8.0 / Stand L 93) we will be displaying our state-of-the-art hose and coupling equipment as well as product novelties:

In addition to PTFE-lined ELAPHARM pharmaceutical hoses, the new **ElaSil®** silicone hose range is also available. ElaSil conforms to FDA and USP Class VI and meets the 3-A Sanitary Standard. The hose sizes DN 13 - 102 mm are assembled to customer specification, with crimped couplings.

The **Camlock** product range from our own Elaflex production has been supplied since 2016. Stainless steel female couplers are also available now in **EASYLOC®** version with automatic lever lock to avoid unwanted disconnection during operation e. g. due to excessive pulsation. Sizes: DN 13 - 50 mm. All Camlock couplings 'Made by Elaflex' are guaranteed to EN 14420-7 in every aspect. They are reliable, leakproof and operationally safe.

Elaflex is also continuously expanding its cryogenic product range. Besides the established MannTek products (Dry Cryogenic and Breakaway Couplings) we will showcase the newly developed LNG composite hose **ELAFLEX CRYO**.

Stay informed

Our product information can be requested any time. They indicate important additional information to the detailed Elaflex general catalogue. New at the booth: The updated 'Chemical & Pharma' brochure, providing an overview about all chemical, pharmaceutical and foodstuff industries related hoses and couplings. PFA coated couplings can be used for the transfer of aggressive fluids. For detailed information, please refer to the new [Elaflex-Information 3.18](#).

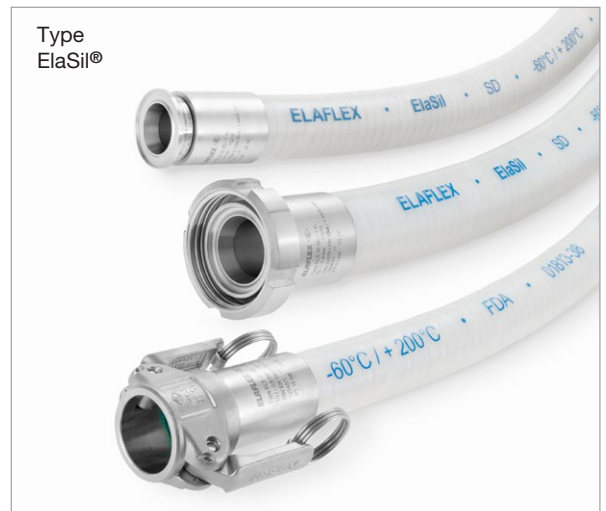

Elaflex Interactive

Our recently updated smart configurators help to easily select customised products.

[Hose Configurator](#) for hose assemblies

[ERV Configurator](#) for rubber expansion joints

[MannTek Configurator](#) for MannTek Dry Disconnect and Safety Breakaway Couplings

Type
ElaSil®

Type
EASYLOC®

Opening: pull eyelet to unlock.
Closing: automatic lever lock

PFA
coated
Couplings
