

At the PetroTrans show 2018 (20.-22. September) in Kassel/Germany, Elaflex will be presenting products for road tankers in Hall 2/Stand D03:

Lightweight Gravity Discharge Road Tanker Hoses 'LG' are now also available in size 2" for application as a lightweight and very flexible vapour recovery (vapour balance) hose.

The 'Camlock' product range to EN 14420-7 from our own production now also include all sizes and types made of brass for petroleum based products. Additionally available: female couplers EASYLOC® with automatic lever lock made of stainless steel in sizes DN 19-50.

'DDC' Dry Disconnect Couplings in DN 65 can also be supplied with space-saving handles, hence suitable for tank trailer hose connections.

In European countries, composite hoses are being used more and more with Electronic Cross-Over Prevention Systems (COP). For our range of **'FWS' composite hoses** we provide the unique **'COPSAFE system'** which guarantees the functional and electrostatic safety for this application.

The opinion of our customers matters. At our booth two development studies will be displayed:

- 1) A nozzle quick-change system involving a compact Dry Disconnect Coupling. It will enable a fast switch between automatic nozzles (e. g. ZVA 25) and bulk delivery nozzles (ZV 400/500, ZH 50).
- 2) The prototype of a modern, ergonomical and light-weight bulk delivery nozzle for heating oil.
