POLYPAL® OIL - The Allrounder for the Terminal

Tanker loading hoses at the gantry of terminals have to adapt to an increasing variety of fuel qualities. New aromatic or additive types may have an adverse effect on the longevity of the lining of a standard hose.

For terminals where gasoline fuel types and additives often change or maybe unknown, **Elaflex provides the new universal hose POLYPAL OIL.**

Its universally resistant and electrically conductive UPE lining is suitable for all types of petroleum based products, aromatics and fuel additives incorporating a very low permeation of highly volatile fuel components.

POLYPAL OIL follows a trend that has already become accepted practice in the chemical industry where universal hoses prevail against hoses with specialised rubber linings.

The new loading hose qualifies as an all-round hose for the petroleum industry and suitable for the most critical applications.

POLYPAL® OIL – The new Allrounder hose for road tanker loading at terminals

The refineries' fuel package output gets ever more complex. In order to manufacture environmentally friendly and efficient premium products, terminals have to constantly handle new or changing fuel qualities. Some of the new compositions of gasoline, aromatics or additives may have an adverse effect on the longevity of standard hoses.

For decades, Elaflex 'Yellow Band' TW hoses have set the standard for bottom loading of road tankers with diesel, heating oil and gasoline.

Loading hoses have to adapt. **Following several years of practical field testing Elaflex recommend the new type POLYPAL OIL as a standard tanker loading hose for gasoline products.**

Due to its universally resistant, electrically conductive UPE lining POLYPAL OIL is suitable for all types of petroleum based products, aromatics and fuel additives. The hose construction provides a very low permeation of highly volatile fuel components. The cover is made of oil resistant chloroprene.

POLYPAL OIL follows a trend that has already become accepted practice in the chemical industry where universal hoses prevail against hoses with specialised rubber linings.

The new type qualifies as an all-round hose for the petroleum industry and suitable for the most critical applications.
